PROFESSIONAL SUMMARY

Highly skilled Software Automation Engineer and Senior AI QA Specialist with extensive experience in process optimization, software testing, and Large Language Model (LLM) evaluation. Expert in Python API integrations and web automation frameworks. Proven track record in training and evaluating advanced AI models (such as Claude Code) via production platforms, focusing on complex multi-turn technical prompting, code verification, and rigorous logic assessment. Adept at building scalable Python-based automation tools and SaaS dashboards.

TECHNICAL SKILLS

- **AI & LLM Training:** Prompt Engineering, Adversarial Red-Teaming, Hallucination Detection, RAG Evaluation, Chain-of-Reasoning Verification, LLM-as-a-Judge.
- **Programming Languages:** Python (Expert), C# (Proficient), SQL, C++, JavaScript.
- **Automation & Testing:** Selenium, Playwright, PyTest, API Testing, Web Scraping, End-to-End Workflow Validation.
- **Development & Data Tools:** Streamlit, Pandas, Git/GitHub, Nuitka, Multi-tenant Architecture.
- **Databases & Systems:** SQL Queries, Firebird DB, ERP Integration (Odoo, Daftra), Data Integrity Auditing.

PROFESSIONAL EXPERIENCE

Senior AI QA Engineer (Freelance) *Alignerr / Labelbox Platform | January 2024 – Present*

- Executed high-level technical evaluations for Claude Code, utilizing the Labelbox environment to refine model reasoning and coding capabilities.
- Developed sophisticated multi-turn prompts to test production-ready engineering practices, including database schema migrations and PyTest isolation.
- Conducted detailed technical audits of model outputs, ensuring code correctness, modularity, and strict adherence to security guardrails.
- Authored evidence-based rationales for grading model performance, consistently meeting high-quality benchmarks for metacognitive feedback and logic assessment.

Freelance Automation & Testing Engineer *Independent Contractor | January 2024 – Present*

- Design and deploy custom Python automation scripts using Selenium and Playwright, achieving a 40% reduction in manual processing time.
- Build robust frameworks for cross-system data validation and execute backend data verification using complex SQL queries.
- Develop seamless API integrations to connect disparate business systems, enhancing operational efficiency and data synchronization.

Systems Integration & Operations Manager (Co-founder) *New Cairo Cosmetics Company | January 2018 – January 2024*

- Managed the digital transformation and complete ERP implementation (Odoo, Daftra) for supply chain and inventory operations.
- Ensured 100% data accuracy across modules through rigorous auditing, system testing, and workflow optimization.

KEY PROJECTS

- **WhaleTracker SaaS Platform:** Architected a multi-tenant live market intelligence dashboard using Python and Streamlit, featuring robust admin panels, tier-based access control, and real-time data visualization.
- **WhaleHunter Pro:** Developed a real-time digital asset monitoring engine built with Python and Streamlit for automated alert generation and secure data extraction.
- **Sweet-Shop POS System:** Engineered a comprehensive desktop application for inventory and cart logic management utilizing C# and Windows Forms.

EDUCATION

Bachelor of Computer Science

Cairo Higher Institute for Engineering, Computer Science and Management

LANGUAGES

- **Arabic:** Native
- **English:** Fluent (Professional Working Proficiency)
